

1 16 beam splitter with no attenuation

Overview

A 1×16 PLC Splitter is a compact and reliable solution that splits one input fiber into 16 output fibers with minimal signal loss. It ensures consistent signal transmission across all output channels, offering excellent performance in passive optical networks. Pellicle beamsplitters provide excellent. An Optical Beamsplitter is an optic or optical device that is used to split a beam of light in two. Newport offers a wide variety of Beamsplitters in various shapes. Advantages are: minimal. The AOA single-mode Planar Lightwave Circuit Splitter (PLCS) is developed based on unique silica glass waveguide process with reliable precision aligned fiber pigtail in a miniature package, it provides a low cost light distribution solution with small form factor and high reliability.
