

2-port KVM switch not displaying

Overview

Solution: First, check if the switch's power indicator light is on and ensure the power source is properly connected. If there's a power switch, make sure it's in the "On" position. Common issues include missing video cables, adapter compatibility, and operating system settings. Problem 4: Certain displays do not show when using a KVM switch for your multi-screen. I have a secondary monitor that do not get any signal (black screen and power is on). Restarting the desktop to see if I can get a signal. The KVM you linked only supports 1 display output. You won't be able to use two monitors Looking at the KVM/DOCK, it does support two monitors from the desktop, but it needs both the display port and HDMI cable from the equivalent ports on the desktop. This is the cable (that works. I'm trying to connect a Fujitsu FD-1008AT to my server but I am having some issues. It only says "No Sync Signal See User's Manual".
