

48-core optical fiber core color spectrum

Overview

The color sequence for 48-fiber optic cables is typically divided into four bundles, each bundle containing 12 fibers with the colors blue, orange, green, brown, gray, white, red, black, yellow, violet, pink, and aqua. Understanding fiber-optic color codes is essential for any technician tasked with installing, maintaining, or troubleshooting modern fiber networks. By adopting the TIA/EIA-598C standard, you gain a universal “language” of colors that speeds identification, reduces miswiring, and enhances safety. This guide explains the latest EIA/TIA-598-D fiber color-coding standard used to identify fiber types, inner fiber sequences, and connector polish styles. We'll break down the TIA-598 color code standard—the industry's universal language—into a simple, actionable system. You'll learn how to identify single-mode vs. Figure 1: Colored jackets of multi-fiber cable.
