

Advanced Relay Protection Technician Practice

Overview

This hands-on course is intended for electricians, technicians and engineers responsible for testing, maintenance and calibration of electromechanical protective relays that protect utility transmission lines and substation equipment. Effective protection schemes and precise coordination are crucial for minimizing system disruptions and ensuring the safety of equipment and personnel. As power systems become more complex and the fault current varies with changes in generation and system configuration, relays become difficult to apply. ABB's Digital Substation Products training and learning centers offer a wide range of training opportunities to ensure you get the most out of your digital substation product, with a special focus on Relion® protection and control relays. Choose from interactive classroom training and hands-on. Our utility relay technician training programs are designed to improve the skills and knowledge of your team through company-specific solutions.
