

Ag optical module

Overview

AG Optics, established in 2000, is a specialized optical component company. It leverages accumulated optical design and ultra-precision mold processing technologies to develop, manufacture, and supply automotive camera lens modules. It is a practical balance. FUZHOU AG OPTICS CO., Locates in Jinsha Industrial park, Fuzhou City. We own standard factory, advanced fabricating machine. Choosing a selection results in a full page refresh. AG, or anti-glare, is a surface treatment on an LCD module that diffuses reflected ambient light to reduce glare and improve readability in bright environments. Yes, AG can slightly reduce perceived sharpness because of its micro-textured surface, but in many real applications it improves effective. An optical module is a typically hot-pluggable optical transceiver used in high-bandwidth data communications applications.
