

Approval Process for the Construction of Optical Fiber Cables

Overview

163 describes criteria for the installation of optical fibre cables defined in Recommendation ITU-T L. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. The charter of the FOA was to promote professionalism in fiber optics through education, certification, and. A passive optical network uses optical splitters to distribute signals from one central optical line terminal (OLT) to multiple optical network terminals (ONTs) without requiring powered network equipment in between. Sections are included for project management; cable handling, testing and equipment; overhead cable placement; underground cable placement; underground enclosures; bonding and grounding; cable.
