

Cable Tray Steel Structure Fabrication Process

Overview

Modern cable tray manufacturing employs sophisticated forming technologies that transform prepared steel materials into functional tray components. Understanding the process is a welded wire-mesh cable management system made of high-strength steel wire. The selection of material and finish is a function of the environment in which it is used, ranging from indoor commercial buildings to outdoor industrial plants and substations. Scope :- This specification covers the following major activities; - Fabrication and installation of Mild Steel (MS) support structure for Galvanized Iron (GI) Cable tray. - Installation of perforated GI Cable tray of size 300 x 50 mm at height ~12 meter on wall and existing metal support structure. Cable racks (also called cable trays or cable support systems) are essential structural elements used in industrial plants, substations, commercial buildings, and infrastructure projects. These racks safely support and organize electrical cables, ensuring durability, accessibility, and safety.
