

Ceramic Insert Sintering Plate

Overview

Ceramic sintering tray and setter plates assist optimally array and fix molded parts in a sintering furnace to prevent brown part deformations during the firing process. Innovative C12 thermal processing solutions include advanced products for debinding. Innovacera manufactures ceramic setter plates for high demands on geometry and material quality for your components. The setter plate is widely use for sintering and debinding of metal injection molding, ceramic injection molding, piezoelectric ceramic transducer (PZT) or Solid Oxide Fuel Cell. High-purity alumina setters are ideal for quality improvement and cost reduction. We possess standard molds in various sizes, we can therefore. Keralpor 99 is our standard setter plate, which offers the greatest advantages when used in thermal processes. If the materials being sintered come into direct contact with the furnace.
