

# Characteristics of Direct-Buried Optical Cable Lines

## Overview

Direct-buried optic cable is a common type of optic fiber communication cable used to lay optic fiber networks directly underground. Note that Recommendation ITU-T L. First, in order to demonstrate sufficient performance of an. ble may extend of the reel and beco ssible safety hazard and/or damaging the cable. Tightening of the reel bolts and maintaining reel tension dur g payout may reduce the chances of thi ar cable damage during handling and installation. When connecting individual buildings, establishing campus networks, or deploying long-distance telecommunications lines, this cable can be buried directly into the. Installing fiber underground is one of the most durable ways to protect a network's backbone — when it's done right. 1 This installation procedure is intended as a basic guideline for the installation of direct buried fiber optic cable. A working familiarity with buried cable requirements.
