

Core Optical Cable Maintenance

Overview

Monthly Maintenance: Randomly inspect fiber optic cable connections, test backbone fiber optic link attenuation, and clean connector end faces. Small oil micro-deposits and dust particles on fiber optic cable optical surfaces may cause a loss of light or degraded signal power which may ultimately cause intermittent problems in the optical connection. Through a tiered. To qualify a fiber, five tests are typically carried out: 1. Optical Time Domain Reflectometer (OTDR) Test 3. Power Meter and Light Source (Insertion Loss) 4. Label and color-code cables clearly. There are three main principles that needs to be taken in consideration for an efficient optical connection: a perfect core alignment, perfect physical contact and dirt-free connectors.
