

# Core switch MPU red light

## Overview

The red CPU light indicates an issue with the CPU. The problem can be caused by compatibility problems, improper installation, or outdated BIOS. Basic troubleshooting steps include checking cables, clearing out dust, and checking CPU compatibility. What values do you get for the MPU6050?

Can you copy and paste the output of this. Are you constantly facing problems due to a red CPU light on your motherboard?

This issue might leave you feeling bewildered and uncertain about the next steps to take. But fear not, as there are practical solutions to unravel this enigma and restore your system's functionality. From understanding. What's the problem that you faced?

The partition is switched by RTOS which shall have the highest ASIL per CPU. so when another partition changes the configuration, how can I detect that to check against the new value to prevent wrong. Inside circuit board LEDs are all green apart from the Status light which is solid red. I have checked all wiring and. But for my it turn on the LED was red light. just to see how it response, it only read for a few round and it stop transmitting and 'TX' LED at arduino UNO is not flashing.
