However, a number of common problems can arise with these devices, including poor fiber management, inadequate protection from environmental factors, poor quality components, inefficient use of space, poor accessibility, insufficient labeling and documentation, and improper. One of the most common problems with optical fiber terminal boxes is poor fiber management. This can occur when there are too many fibers in the box, or when the fibers are not properly organized or labeled. Primary Purpose: Its core function is to provide a secure, protected location. The 96Core Fiber Optic Splice Closure exemplifies this design by offering protection for spliced optical fiber points and cables. The horizontal design accommodates multiple cables and splices, making it suitable for complex networks.
