

Distance from the distribution box switch

Overview

Approved Document M of the Building Regulations states that consumer units/fuseboxes should be mounted so that the switches are 1350-1450mm above floor level. If you are looking to have electrical work done in your home, a registered electrician can advise you further. Ensuring proper switchboard clearances is crucial for maintaining safety and functionality in electrical installations. Switchboards must be located and installed with adequate space, ventilation, and accessibility to prevent overheating, facilitate easy maintenance, and ensure safe emergency. Working space: The front clearance, side clearance, and height clearance requirements for electrical equipment that provide a safe area for maintenance, inspections, and other work. Dedicated space: The space equal to the width and depth of electrical equipment in addition to the space extending. These requirements vary depending on whether the electrical equipment is rated at (1) 1,000 volts or less (See, Article #2) or (2) over 1,000 volts. You can find one local to you. Distribution box and switch box should not exceed 30 meters.
