

Distribution box leakage protection button

Overview

The buttons on the meter box (small power distribution board) are mainly leakage protection buttons, which are used to check whether there is leakage in the home. This key is called the safety key, also called the life key. Be sure to switch off appliances beforehand, such as PC's, etc., and do this test during daylight hours. Here are mainly based on their protection functions and Use classification to describe, generally. Today, let's learn about the leakage protection switch of the Small Power Distribution Board. The leakage protection switch of Small Power Distribution Board not only has the leakage protection function, but also is the main function of the leakage protector to ensure personal safety by tripping. The leakage protection switch is suitable for the circuits of AC 50Hz, rated voltage of 230V ~ 400V, rated current of 63A, mainly consists of the zero-sequence current transformer, electronic components board, leakage circuit breakers. It detects tiny imbalances in current that could be flowing through a person (electric shock) and cuts power in a fraction of a second.
