

Do I need a cable management rack but not a patch panel

Overview

Both cable managers and patch panels help keep your rack neat, but their functions are not the same. They serve different purposes and are not interchangeable. A patch panel is a device used to manage the connection points of cables. The cable management rack is not directly related to network transmission but mainly simplifies the planning of cross-connection systems facilitates. A cable manager is an organizational tool designed to keep your cables neat and tidy within a network rack or server room. I've also bought several of these cable management. Do you really need cable management for a cabinet with just switches and patch panels?

We are about to start wiring out a building expansion and our vendor has laid out the racks in the following configuration: Option 1 All the patch panels would be connected to the switches with 1ft+ cables fed. A patch panel is a passive cabling management device used to terminate, label, and organize cables.
