

Does Chile have fiber optic splicing

Overview

On June 4, 2025, Chile's government and Google formalized an agreement to build the Humboldt Cable, a submarine fiber-optic line that will directly connect South America and the Asia-Pacific region. This project, first outlined in 2016 and developed through public-private partnership, will run. The Organisation for Economic Co-operation and Development (OECD) has placed Chile in sixth place among the countries with the highest growth in its fiber optic connections during 2020, according to an update report on broadband usage statistics. The 'Humboldt Project,' a 14,800 kilometer cable from Chile to Australia via French Polynesia, aims to provide a faster alternative to existing US connections. As of March 2024, fiber optics accounted for 69.7% of fixed connections, consolidating its position as the main technology in 14 regions of the country.
