

Does the core switch have optical ports

Overview

Core switches typically feature a higher number of ports, often in a modular design, enabling flexible combinations of optical and Gigabit Ethernet ports. These switches can be configured with simple VLAN routing protocols and basic SNMP functions, but they have relatively. An all-optical Ethernet switch is a network switch whose service ports are entirely optical, meaning every interface uses fiber rather than copper. This design enables end-to-end optical signal transmission, avoiding the conversion between electrical and optical signals at the switch port level.) BTW, as you mention your core device is a. Check transceiver compatibility with ICX Switch model and Outdoor Access Point Ethernet ports. The general core switches are Layer 3 switches, and various advanced network protocols such as routing protocol/ACL/QoS/load balancing can be set.
