

Factory cables are placed in outdoor cable trays

Overview

Installation of Cable in Cable Trays involves precise routing on support systems, NEC/IEC compliance, grounding, ampacity derating, bend radius control, segregation of services, fire safety, labeling, and reliable cable management for industrial and commercial facilities. Many cable tray rated cables include a crush and impact test as part of the listing and are rated as exposure rated (ER). A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray is intended for instrumentation and control applications that require. Tray cables (TC) are multi-conductor cables designed and rated for installation in cable trays and raceways or supported by messenger wires. Unlike standard electrical cables, tray cables feature enhanced insulation and jacketing to withstand mechanical stress and exposure to oil, sunlight. This document outlines the key requirements for cable tray layout, installation, and fireproofing in industrial and commercial environments.
