

Fiber Optic Cable Electrical Protection

Overview

Many power companies choose fiber optic cables for their monitoring and control systems. Yet, outdoors, they face temperature swings, moisture, UV exposure, rodents, and human interference. Protecting them is essential for long-term reliability. This guide covers how to. Lightning is an electrical discharge within clouds either from cloud to cloud or from cloud to the earth. For example, it will not only affect all DWDM fiber channels in short bursts, but also affect transmission directions. Our OPTOFLEX wire and cable protection products provide reliability, durability, and high performance in your demanding applications. Our products are used to safeguard and protect fiber optic wires and cables against heat, cold, moisture, dirt, dust, pressure stress, UV and other potentially. Cable provides protection for the optical fiber or fibers within it appropriate for the environment in which it is installed. OTDR technology monitors fiber cables around the clock. While not a primary lightning protection method, these features can provide some level of protection.
