

Fiber Optic Cable Non-woven Fabric

Overview

Cable wrapping non woven are chemical bonded (foam bonded) non woven fabrics made of 100% polyester. It is a type of fabric made by binding fibers together using chemical binders. In most cases, it is used as water block tapes after laminated with SAP powder. Non-Woven Polyester Tape (NANOVN), is a non-conductive or semi-conductive and non-woven tape which produced micro diameter polyester short fibers with Carding technology in natural white color or carbon coated black color. DijitalPort provide high tensile strength and smooth surface of non-woven. Econ's cable wrapping non-woven Fabric is a specialized material designed for insulating and protecting cables in diverse industrial applications. It can be used as isolation layer, cushion layer and thermal protection. Name:Cable non woven fabrics/Plain Non Woven Fabric Application: Cable nonwovens are widely used in various wires and cables requiring moisture and water resistance: High-voltage and ultra-high-voltage power cables Submarine cables (which require extremely high water resistance) Optical cables. Nonwoven > InduTech > Applications > Cable & Telecoms If you're a manufacturer or service provider, you'll know how important it is to have reliable materials for buffering and bedding your industrial cables. That's why we work alongside cable manufacturers to develop intelligent fabrics, of less. woven fabrics, absorbent powder, nets, copper/Al/Pet foils, paper, mica, yarns. Coating with carbon black; Super absorbent polymers/lamination; Cutting; Packaging Tapes and yarns for different applications in cables: power cables LV, MV, HV, EHV, telecom, optical. Introduction: It consists of.
