

Fiber Optic Cold Connector Loss Standard

Overview

IEC Standard 61300-3-35 is a global common set of requirements for fiber optic connector end face quality designed to guarantee insertion loss and return loss performance. The estimate, called a "loss budget" is calculated using typical component losses for a system. Fiber optic testing of a newly installed system not only verifies that the system meets its design requirements, but also creates a performance baseline for all future testing and troubleshooting of the system. Fiber optic connectors are of particular importance, as they show significant quality differences which cannot be seen by the eye. If it's a long outside plant cable with intermediate splices, you will. Fiber fast connectors (also called mechanical splices or cold connectors) are essential components in FTTH deployments.
