

Fibre Channel Interconnect Devices

Overview

Fibre Channel hardware interconnects storage devices with servers and forms the Fibre Channel fabric. It is used primarily for storage area networks (SANs). When configured as a Fibre. The system integrates a low-latency, lossless 10/25/40/100 Gigabit Ethernet unified network fabric with enterprise-class, x86-architecture servers. Fibre Channel (FC) is a high-speed data transfer protocol providing in-order, lossless delivery of raw block data. The International Committee for Information Technology Standards (INCITS) T11 Technical Committee sets FC standards. FC networks provide high-performance. "The Fibre Channel Industry Association (FCIA) is a mutual benefit, non-profit, international organization of manufacturers, system integrators, developers, vendors, industry professionals, and end users. " Motivation (Why do it?

) Concept (What is it and how is it done?)

) DWDM (Dense Wavelength.
