

Fireproof enclosed cable trays for the Middle East

Overview

This article dissects the two primary solutions outlined in common specifications: Aluminized Polypropylene Scrim Encapsulation (Wrapping) and Intumescent Fire-Resistant Painting (Coating). Middle East projects expose cable tray systems to extreme ambient temperatures, intense solar radiation, dust, and—often—coastal corrosion. When fire resistance is required, the “best” solution is rarely universal. 7 products are successfully used to protect cables in high-rise buildings, industrial buildings, and offshore facilities as well as in sensitive areas, such as hospitals, airports, production. Fire-resistant cable trays have become an important element of infrastructure to protect facilities from the devastating effects of fire. Available in different range, applied for ideal locations where the Metallic systems get easily corroded. Our cable tray systems are engineered for modern infrastructure, ensuring safe, organized, and efficient cable routing across commercial, industrial, and utility. Welcome to Bonn Metal Construction Industries LLC (BMCI), one of the leaders for manufacturing cable management systems and providing a range of premium cable trays, ladders, and accessories. Producing 12,000 tons per annum, BMCI acts to support the industrial and commercial development throughout.
