

High-density edge data centers in Singapore

Overview

ST Engineering is planning a \$88 million investment in a new seven-story data center, which is targeted for completion in 2026. Other major operators, such as Equinix and Keppel Data Centres, are also expanding their presence. DayOne, a Singapore-headquartered global data center pioneer, today broke ground on its first data center in Singapore. The 20-megawatt (MW) facility spans about 40,000 square meters of gross floor area, with Phase One scheduled to be ready-for-service (RFS) in 2026. 09 million in 2025 and is anticipated to reach USD 880. 86% during the forecast period. The project integrates 100% renewable energy, SOFC-based hydrogen power generation, and cutting-edge hybrid cooling technologies. Singapore remains a critical global data center location, focusing on high-value workloads and sustainability while regional competition. Singapore's role as a regional connectivity hub is being reshaped by three forces: accelerating investment in AI-ready infrastructure, rising demand for edge computing nodes across APAC, and tightening data-sovereignty requirements under frameworks like the Personal Data Protection Act.
