

How many circuits are in a 13-position distribution box

Overview

AT-13 supports 13 circuits in a single-row layout. Zero row: 8 holes; Ground row: 8 holes. The AT-13 waterproof distribution box is IP65 rated with waterproof sealing strips, suitable for both indoor and outdoor use (IEC 60529). Example: Need a circuit for your 1,800W microwave?

Calculator Tip: Tools like Desmos' scientific calculator make light work of conversions. Just plug in your wattage and voltage—let it handle the decimals. You're not just calculating numbers—you're designing a system that matches how you live. Built from PC/ABS new material, it features a assembly (960 °C hot wire test). Usually, all the fuses, breakers and other circuit protection devices for these secondary circuits will be held within the same single enclosure. It is a vital part and central hub of any electrical system. The hub distributes electrical power from a single input source to various circuits throughout a building. Whether it's a home, office, or factory, the DB box makes sure power. Distribution boards (otherwise known as fuseboards) come in various shapes and sizes but you can expect them to look something like the picture above.
