

# How much does indoor fiber optic cable cost per kilometer

## Overview

A practical frame is \$40,000–\$350,000 per km, with a common mid-range around \$120,000–\$180,000 per km for standard single-mode fibre in ducted runs. Per-unit considerations include \$/km for total project, \$/duct meter for ducting work, and \$/splice for termination. Fiber-optic cable materials typically cost \$1 to \$6 per linear foot, depending on fiber count and cable type. Commercial building installations with 100-200 network drops generally range from \$15,000 to \$30,000. The main cost drivers are materials, installation time, and environmental factors that affect trenching, conduit, and terminations. Understanding these factors can help in estimating the. For the same cable, the price of 1KM/drum is usually higher than the price of 2KM/drum Market Demand: Fluctuations in demand due to technological advancements or market trends can influence prices. For example, an increase in demand for high-speed internet can drive up costs. In straightforward urban corridors with existing ducts or minimal permitting hurdles, total per-km costs often land near the low end.
