

How to fix the flexible optical fiber in the terminal box

Overview

To fix it, first use a VFL laser or an OTDR to pinpoint the damage. For a permanent fix, fusion splicing is better than mechanical connectors because it prevents signal loss. Always protect the fiber optic cable repair with a sleeve and keep bends smooth in your trays. What is the Fiber Termination Box?

Fiber termination box (FTB), also known as optical terminal box (OTB). Fiber Termination Boxes (FTBs) are crucial components in fiber optic networks, facilitating the termination, connection, and management of optical fibers. It functions as a junction between the incoming fiber cable and the outgoing customer-side fiber cable, where one fiber can be spliced, patched. Fiber terminal boxes and closures serve as transition and protection points within FTTH and ODN architectures.
