

How to illuminate the small end of an optical cable

Overview

To build a homemade fiber optic lamp, gather fiber optic cables, a light source like LED or small bulb, and a base or holder. Carefully strip the cable ends and insert them into your chosen base, securing them in place. I didn't have a great way to attach the end of the optical fiber to the LED itself. I've got a HAT board with five status LEDs I'd like to get somehow extended to the front panel of my system, so that I can read its status without opening the enclosure. The five white rectangles you can see on the picture near the bottom edge of the board are the LEDs: The almost obvious solution. Optical fiber can be used for transmitting light from a source to a remote location for illumination as well as communications. In fact, fibers are made to not only transmit light but to glow along the fiber itself, so it resembles a neon light tube. org), an amateur scientist and Rolex Award winner, was named by Discover magazine as one of the "50 Best Brains in Science. " His books have sold more than 7 million copies.
