

How to replace a rusty cable tray

Overview

Inspect your cable trays frequently for any signs of rust or damage. Use a wire brush to remove the rust and then apply a rust-inhibiting primer followed by paint. I'll share what I've learned from years of doing this, so you can tackle your next. There are so many things out there that are trying to degrade, damage or destroy your electrical wiring systems, especially the containment that keeps all your conductors in place and safe. more. Overloading cable trays can lead to breakdown of the tray, its connecting points and/or supports, causing hazards to persons underneath the cable tray and even leading to possible electric shock ● When cable trays are overfilled, excessive heat build-up in and around live conductors can cause the. To tackle this issue, let's break down the steps you can take to prevent rust and ensure your cable trays remain in top condition: Choose Quality Materials: Before purchasing, research manufacturers known for their corrosion-resistant products. Look for trays made from galvanized steel or stainless. Then anchor some angle iron to the masonry at several points on either side and use some heavy duty unistrut underneath the tray to support it at maybe 4 or 5 points along its length.
