

How to use the distribution box module

Overview

This guide provides the full installation workflow for both the Client Module (Riser Cable Installation) and the Operator Module (Feeder Cable Installation), along with detailed instructions for PLC Splitter installation and patch cord routing between modules. The distribution box (DB box) plays a key role in safely and efficiently distributing electrical power. Electrical systems are vital for both homes and industries today. They act as the central location where electrical energy is given out and routed to different circuits in a building or facility. We also highlight how reliable manufacturers like NUOMAK support stable, compliant, and cost-effective power distribution. The MODB Multi Operator Distribution Box 48FO is a high-capacity, multi-operator fiber distribution enclosure widely used in FTTH building networks.
