

How to use the new optical module

Overview

If the new optical module is a CFP one, insert the new optical module into the optical port of the card, push the module panel horizontally into the connector using even force with both thumbs. Optical modules are electrostatic-sensitive components. Therefore, you must take ESD protection measures when replacing optical modules. Small Form-factor Pluggable modules (SFP module) are the workhorses of modern network connectivity, enabling flexible fiber optic or copper links between switches, routers, firewalls, and servers. Its primary function is to achieve optoelectronic conversion by converting electrical signals into optical signals and vice versa. As the demand for faster and more reliable internet and data services grows, understanding these devices becomes increasingly important.
