

Huawei Single-Fiber Bidirectional Technology

Overview

The WDM system supports two transmission modes: single-fiber unidirectional and single-fiber bidirectional. Simple design and low requirements. Easy fault isolation. Huawei Takes The Lead In Passing The Industry's First 50GE Single Fiber Bidirectional Transmission Technology Test Recently, China Mobile Research Institute organized a 50GE single-fiber two-way new technology test, and Huawei took the lead in passing the test. High-level modulation formats such as 32QAM and 64QAM, have been. BiDi SFP means bidirectional small form-factor pluggable transceiver. The most distinct characteristic of the bidirectional SFP transceiver is that it is able to achieve bidirectional fiber optic communication by operating on a single fiber. Based on WDM (Wavelength-Division Multiplexing).
