

Huawei switch optical port connection failure

Overview

This document describes how to check the switch interface or port status and how to locate an interface physically down fault and restore the interface to the up state. Hardware failures: include hardware. Problem: All optical ports cannot be connected, and the indicator lights are not on. During use, reading optical module information helps understand its real-time operating status, enabling faster troubleshooting of link abnormalities. The following uses the. However, in actual deployment and operation and maintenance processes, optical link failures such as optical module docking failures and port Down often occur, which not only cause data transmission interruptions but may also affect business continuity. This article will elaborate on the core. If the fault is caused by incorrect configuration or networking environment, change the configuration or networking environment.
