

Intelligent power distribution cabinet wiring

Overview

From the topology diagram, it can be observed that in order to integrate traditional frame switches and molded case circuit breakers into the intelligent power distribution system, the following components are configured: ① an industrial control touch screen HMIST6500 for displaying. A cabinet or floor-standing PDU is a large, three-phase power distribution unit enclosed within its own cabinet. These PDUs are typically used in large data centers for both raised and non-raised floor applications, where they receive incoming power and distribute it to individual racks or groups. Rodent-proof meshes or cable protecting rings are installed at the cable outlets of cabinets for ease of cable routing. Wire. Our in-cabinet-mounted Power Distribution Units (PDUs) are manufactured from high-quality components to support all your mission-critical applications. Belden PDUs are designed to facilitate seamless integration into Belden racks and cabinets.
