

KL6100 Optical Cable Testing

Overview

The nanjing jilong kl-6100 is a versatile otdr tester specifically designed for fiber optic network testing. it utilizes the latest 25-year optical signal processing chip and a color touchscreen, offering a user-friendly and intuitive operating experience. accessnetwork testing (P2P), passive optical LAN (POL), cable TV (CATV) and hybrid fiber coaxial (HFC)network testing, as well. The JILONG KL-6100 is a fusion splicer designed for efficiently joining optical fibers. The splicer is suitable for use in various applications such as. ity Directive (EMC) 2014/30/EU, with CE marking. It fully meets the safety, quality and compliance standards required by AliExpress, suitable for global sales, especially the European, American, Southeast Asian and Middle Eastern markets. It offers single, dual, and three-wavelength models, with the single-wavelength model supporting. In the 25 years of rapid development of optical fiber network environment, nanjing jilong kl-6100 otdr optical fiber tester has become the first choice for many optical network maintenance and operation personnel. It integrates optical time domain reflectometry (otdr), fiber break location, and trunk. JILONG KL-6100 FTTx OTDRModule Operation GuideWeb: www.jilong.com.
