

# Latest Testing Standards for Power Fiber Optic Cables

## Overview

The IEC has published a new standard for the testing of fibre optic cabling. IEC 61280-4-5 provides test methods to measure the attenuation of installed multimode and single-mode optical fibre cabling plant as well as the determination of their polarity and length. IEC 61280-4-5 was published by the International Electrotechnical Commission (IEC) and published in September, 2022. Fiber optic testing of a newly installed system not only verifies that the system meets its design requirements, but also creates a performance baseline for all future testing and troubleshooting of the system. Corning recommends that all fiber optic systems be tested to a minimum set. We offer full-service OEM and ODM solutions for fiber optic cables, assemblies, and connectivity products — from design and prototyping to global production and logistics.
