

Laying out the 90-degree bend in the cable tray

Overview

Creating a 90-degree elbow in an electrical cable tray, often called a "fabricated" or "mitered" bend, involves cutting, bending, and fastening a straight section of tray. The most common method involves creating two 45-degree cuts to form a 90-degree angle. Includes a full demonstration on how bend steel cable tray using a crimping to. Construction of a flat 90° bend (A) The amount of tray lip to be removed is equal to 2, 3/4 the width of the tray, half of this measurement will be removed on either side of the centre line. To remove the lip we can use a small hand grinder (B) or a file. Learn the step-by-step process to make an internal 90 bend in cable tray. Ideal for electricians and contractors looking to enhance their skills. Students training aid for bending 20 mm Steel (metal) Conduit to produce a 90 degree bend to the correct measurement.
