

Level 2 Distribution Box Protection

Overview

Level 2 protection mainly focuses on suppressing transient overvoltages and effectively absorbs the residual surge energy after Level 1 protection. Scope of Application Install the Level 2 surge protection device in the distribution equipment to focus on protecting sensitive equipment. Technical Requirements Maximum discharge capacity: $\geq 40\text{kA}$ per phase. Voltage protection level: $\leq 2000\text{V}$. Let's make a hypothesis: a newly built residential area introduces a 10kV incoming line and builds a distribution room. Essential for quarries or heavy industrial zones where dust concentration hits 50mg/m^3 or higher. Testing Insight: During IP5X/6X testing, enclosures are placed in a dust chamber for 8 hours with talcum powder. Surge Protection Devices (SPDs) are installed in parallel upstream from electrical equipment in a position such that, during any excessive voltage event, the SPD will act as a low-impedance path to earth. This channels the high voltage energy away from the downstream equipment before its voltage. The drawing of engineering drawings should be carefully carried out, and all drawings and symbols must conform to the provisions of "General Graphic Symbols of Security System" issued by the Public Security bu and the "Standard of Graphic and Text Symbols for the design of Industrial Enterprise.
