

Lightning protection grounding cable tray support

Overview

Cable Trays support insulated electric cables used for power distribution and communication. Copper or aluminium down conductor system protects a structure from damage due to lightning strikes by safely passing their extremely high voltage currents to “ground”. An overhead cable system can provide protection. NFPA780, Standard for the Installation of Lightning Protection Systems 1997 Edition, provides the complete solution for safeguarding against lightning risk. From our own designed and manufactured products, through to risk assessment and systems design advice, Furse offers a refined and installed in many prestigious rawings and syst signs to any recognised s ne of nature's most powerful and. To aid engineering firms and specification designers, we have assembled a filterable collection of generic installation details and relevant specification sections. Please contact us if you have any questions. Welcome to Harger's Engineers Corner. To aid engineering firms and specification. Cable tray may be used as the Equipment Grounding Conductor (EGC) in any installation where qualified persons will service the installed cable tray system.
