

Mobile Direct-Reading Spectrometer

Overview

A mobile direct reading spectrometer is a portable device designed for on-site metal analysis. Equipped with advanced optical and detection systems, it enables real-time composition analysis in manufacturing, scrap recycling, and field inspections. The LS-M9900 spectrometer inherits the stable data performance of fixed spectrometers, enabling the detection of a wide range. The LR-M9900 mobile direct-reading spectrometer is a specially improved version of the optical system of a fixed laboratory spectrometer, making it a portable spectrometer. The market is projected to grow from USD 120 million in 2025 to USD 172 million by 2032, exhibiting a CAGR of 6. The industry is witnessing significant growth, driven by technological advancements and increasing.
