

Network rack door opening operation

Overview

Insert the key into handle and turn key 180 degrees, counter-clockwise. 90 degrees towards center of door to allow door to open. Snap top of handle into lock cutout, be sure to engage fully snap retaining. This section covers basic operation and methods required to install, remove, reverse or change swing, combination and HFID handles on doors. Hook bottom of handle into. All the front doors open Left-Right, so we can remove the Front doors by removing the first one to the left and going right one cabinet at a time all the way across from there. This will remain unseen unless you install contact closure sensors that will let you know if the door is in its locked or open. To secure server rack doors, a combination of electromechanical handle, software and radio technology is a best choice. Permission assignment is done online, saving you a lot of administrative effort.
