

Network rack height 1 8

Overview

The most common height is 42U (about 6 feet or 1.8 meters), but computer racks can range from 1U to 48U in height. The depth of a standard server cabinet typically ranges from 24 inches (610 mm) to 48 inches (1219 mm), with 36 inches (914 mm) being the most common. A rack unit (RU or U) represents a standardized measurement to convey the vertical height or space within server racks or equipment cabinets. Important: U describes height only, but a server's real "capabilities" are also determined by chassis depth, internal layout, airflow, rails, power, and expansion (PCIe/risers, NVMe). Use the LundHalsey console configurator to design your perfect console and control room in 3D and VR. The RSH Custom Rackshelf Finder boasts a database of over 11,000 meticulously measured components, and growing every day for our RSH shelves and faceplates. Cassettes can be replaced or rearranged in seconds—adapt to your changing infrastructure without starting over. 12U 18" Depth Wall Mount 19" Enclosure S. Transit within 4-6 business days 19" Wall Mount Server Rack Cabinet 12U (24"w. Designed to be the backbone of your data center, this highly scalable server delivers exceptional performance and flexible configuration options. Selections may result in additional updates to the overall configuration, which may impact the price for Support and Services and the total overall price.
