

ODF rack optical fiber connection

Overview

An Optical Distribution Frame is a rack or cabinet used to organize, protect, and manage fiber-optic cables. Holds fiber adapters and connectors (LC, SC, ST, etc). It is used to terminate, connect, and distribute optical fibers, and it can be installed in various environments such as data centers, telecom rooms, and central offices. It ensures fiber management is structured, minimizes signal loss, and provides accessibility for maintenance and future expansion. Protection connectors for the stripping of both ribbon and bundle optical cables, there are different type of cable stripping protection connector according to the type of optical cable in the. An optical Distribution Frame (ODF) or patch panel is the starting point for optical cables, most commonly found in rack cabinets in Head End (HE)/Central Office (CO)/Point of Presence (POP)/Data Centre (DC) or smaller cabinets or enclosures.
