

OSPF optical module 40W

Overview

2T modules is expected to reach up to 40W. It is well accepted that integrated heatsinks (IHS) provide better cooling performance compared to riding heatsinks (RHS) implementations, provided the fin height is optimized for the available area. The 1RU system provides. Optical modules are optoelectronic devices that perform photoelectric and electro-optic conversions. 6T Ethernet or InfiniBand connection may cause permanent damage to the device. This means that the bandwidth is higher than what traditional types can handle. Normally, each OSFP module can accommodate data speeds between 200 Gbps and 400 Gbps, which makes it ideal for use in. This specification defines the electrical connectors, electrical signals and power supplies, mechanical and thermal requirements of the OSFP Module, connector and cage systems. The OSFP Management interface is described in a separate document, Common Management Interface Specification for 8/16X.
