

Optical Module Inspection Method

Overview

Automated optical inspection (AOI) is a machine vision-based technology that uses high-resolution cameras and sophisticated image processing algorithms to inspect printed circuit boards for manufacturing defects. The OptoInspect3D technology package developed at Fraunhofer IFF provides you a modular toolkit for implementing 3D scanning systems for specific applications. The system captures images of the PCB and compares them against a reference. Optical inspection methods have existed ever since electrical assemblies were tested. They are used to check the visible quality features of an assembly, or in other words: was an assembly correctly assembled and soldered, missing component) and quality defects (e. Nedinsco. eally matched to your production process. Customers around the world rely upon our over 20 years of inter x +49 9131 6108 fects or features need to be insp.
