

Phase wire color in the distribution box

Overview

Wire color: The neutral wire is blue, and the color of the phase wire (A phase is yellow, B phase is green, and C phase is red) should meet the standard. The wiring color codes are the standard safety language of electricity. They make it easy to identify immediately which wires are live, neutral, or grounded (avoiding costly mistakes and hazardous accidents). This guide describes wiring color codes, international standards, and main rules to keep. Electrical engineers, contractors, traders, manufacturers, and especially electricians worldwide rely on different wiring color codes for wire and cable installations in industrial buildings and residential homes. These color codes are used for electrical distribution systems, and while some are. Most European countries follow a wire color code established by the International Electro-technical Commission (IEC). Please refer to local regulations. It makes it easier and safer to. A quick look at a wire's color can reveal its role in powering an appliance or circuit. The National Electrical Code®.
