

Portable Three-Sequence Current Protection Tester

Overview

A three-phase sequence current protection test device is a precision device specifically designed for testing three-phase protection devices in power systems. With its compact design and low weight of 13.7 kg and offers 4x300V and 3x20A outputs. 3 genX allows checking of all meter installation parameters and associated circuits. Main Applications: Its core. The PTE-300-V equipment is a universal, portable, test system with three outputs to test single and three phase protective relays. This enables the unit to be used as a complete single-phase. HZJB-430 handheld relay protection tester is mainly used in power grid companies, power plants, electric construction companies, comprehensive security manufacturers, petrochemical companies, rail transit traction power supply system and other users of electrical secondary equipment operation and.
