

# Repair welding of distribution box

## Overview

First, fix the distribution box or panel using an iron frame. The welding and bolt connection of the distribution box made by the distribution box manufacturer shall be firm, and the welding seam shall be uniform and smooth, without welding skin, welding penetration, air hole and other adverse phenomena; The bolt connection shall have flat and spring washer. Advantages of Automatic Welding for Distribution Box Enclosures Consistent welds with neat and attractive appearance Increased efficiency, ideal for mass production. However, many manufacturers prioritize. Repair welding involves a series of meticulous steps to ensure the effective restoration of damaged metal components. Straighten the angle steel, measure the dimensions, mark the cutting lines based on the dimensions, perform bending and cutting, locate the drilling positions, and finally weld it. During bending construction, align it correctly before. The reasons for making a repair are many and varied, from the removal of weld defects induced during manufacture to a quick and temporary running repair to an item of production plant. In these terms, the subject of welding repairs is also wide and varied and often confused with maintenance and.
