

Reset the port count of the fiber optic switch to zero

Overview

The clear statistics global command clears all counters and statistics for all interfaces except SNMP. when this happens i can't use the 10gb modules and there is no activity. So to test this, i pushed out a new config to 2 switches, rebooted, and did a show config. For the following commands, if the managed FortiSwitch unit is not specified, the command is applied to all ports of all managed FortiSwitch units. diagnose switch-controller switch-info port-stats <managed FortiSwitch device ID> <port_name> For example: FG100D3G15817028 (global) # diagnose. One end of the RJ-45 network cable is connected to the PC NIC, and the other end is connected to the SW's network port. #After the connection is. The 8x8 MEMS FIBER Optical switches establish optical signal paths passively in milliseconds supporting all data rates, ideally suited to manage and monitor large optical networks intelligently and remotely.
