

Rooftop Communication Tower Equipment Types

Overview

- Types of Towers: Common types used on rooftops include monopoles, self-supporting towers, and guyed towers. In 2025, the global telecom towers market reached USD 29. Rooftop cell sites, also known as rooftop telecommunication towers, are critical for delivering high-speed. Monopole towers are single-shaft tubular steel structures designed to minimize space usage while maintaining sufficient height and load capacity. Constructed with a steel framework, typically triangular or square in shape, they offer robustness and the. A rooftop telecom structure is a steel antenna mounting system installed on building rooftops, typically ranging from 3 to 30 meters in height with low-profile designs under 9 meters. These structures weigh between 200-800 kg and support 3-6 antenna panels for 4G/5G networks. Assessment of the Existing Building: - Structural Integrity: Assess. 1. Selection Guide: Use a three-legged tower for economy; choose a four-legged tower for high wind.
